Independent shops to global brands

Trusted by

The complete toolkit for in-store pickup and local delivery on Shopify

Product availability and scheduling · Location and inventory control · Order and fulfilment management · Customization and compatibility · Delivery and logistics integration · Communication and security · Payment options

Order scheduling

Reliable timeslots for customers. Predictable prep for your team. Set slot capacity per location, define cut-off times, and block out the dates you're closed.

Split fulfillment

One checkout, one payment — the order splits behind the scenes so your team sees exactly what to pick, pack and hand over.

Widgets & Extensions

Product page, cart, checkout and order-status widgets, so customers know what's possible before they reach payment.

Product availability

Control fulfillment methods per product, collection or tag. A wedding cake becomes pickup-only; a mug ships anywhere.

Shopify POS integration

Staff see pickup orders in POS, mark them collected, and inventory stays accurate across every location.

Customer notifications

Order-ready emails and SMS fire automatically, which cuts "is it ready yet?" tickets.

Show pickup, delivery and shipping options across your storefront

- Product, cart, checkout and order-status widgets
- Clear pickup, delivery or shipping selection
- Prevent invalid fulfillment combinations early
- Reduce checkout friction and abandoned carts

35%

Fewer checkout drop-offs
when fulfillment options appear before checkout

Our pricing

Essential

\$49.99

1 location
250 orders/mo

Advanced

\$79.99

1-10 locations
1,000 orders/mo

Professional
