Distance-based rates, made simple

Shipping rate management · Location control · Customization and compatibility · Localization · Support

Distance-based pricing

Charge delivery rates based on how far customers are from your store, helping you price more fairly and protect your margins

Flexible rate rules

Add pricing rules for weight, order value, or special addresses to create delivery charges that match your operation

Custom delivery overrides

Handle edge cases with custom rates for specific addresses when standard rules don't apply

Real-world routes

Calculate distance using fastest or shortest routes, so your rates reflect how deliveries actually happen

Multi-location delivery

Calculate rates from multiple store or warehouse locations, so rates stay accurate as you grow

Rates transparency

Use detailed rate logs to understand how rates are calculated, troubleshoot issues faster, and stay confident in your setup

Shipping rate management

- Set a base delivery fee, charge per distance, and apply maximum caps
- Straight line or route distance, in miles or kilometers
- Exclude highways, toll roads, or ferries when calculating routes
- Custom address overrides and detailed delivery rate logs

1-100 Store locations supported
rates stay accurate as you grow
